DETAILED ACTION

Response to Remarks

1. Applicants' arguments and amendments, filed on 7/8/2004, have been approved and entered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either newly applied or reiterated. They constitute the complete set presently being applied to the instant application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1637

3. Claims 1-10, 26-32 rejected under 35 U.S.C. 103(a) as being unpatentable over Drmanac (US6,309,824) in view of Gingeras et al. (US6,228,575).

Applicants argue that the references do not suggest the instant invention because Drmanac does not discuss "exposing a substrate containing a first feature comprising an experimental target specific probe and a control specific to a labeled control target such that the labeled target binds specifically to control specific probe bound to the surface...". This is not convincing because as the previous office action states which can be easily found in the Summary of the invention of the Drmanac, it is disclosed: "...a method for detecting a target nucleic acid species including the steps of providing an array of probes affixed to a substrate..." which is viewed to be the instant target specific probe "...applying a target nucleic acid to the array under suitable conditions for hybridization of probe sequences to complementary sequences..." which is viewed to be the instant control specific probe "... introducing a labeled probe to the array.." which is viewed to be the instant labeled control target. Further the target of Drmanac is viewed to be indirectly bound to the substrate before adding the labeled probe.

4. **THIS ACTION IS MADE FINAL.** See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for response to this final action is set to expire THREE MONTHS from the date of this action. In the event a first

Art Unit: 1637

response is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for response expire later than SIX MONTHS from the date of this final action.
